The Value of Clinical Trials in Denmark

NEXT, The Danish Association of the Pharmaceutical Industry (Lif) and Invest in Denmark have published a report made by Copenhagen Economics which quantifies the value generated by clinical trials in Denmark.

The report “Værdien af kliniske forsøg i Danmark” (The value of clinical trials in Denmark) is available at the NEXT homepage. Unfortunately, the report is only available in Danish. See it here.

The main conclusions of the report are: Clinical trials by pharmaceutical companies deliver value to the Danish society. On average, a clinical trial improves GDP by DKK 0.9m and the public budget by DKK 1.2m.

The positive economic effects arise from trials conducted in Denmark through several drivers: More and better healthcare, highly productive jobs and new research in Life Sciences.
